IMPROVES SAFETY AND SECURITY OF LONE WORKERS ENHANCES PRODUCTIVITY OF STAFF

More than just a lone worker system, the Brabourne Advanced Lone Worker System [BALWS] is ideal for on site use where staff members may be at risk from working alone, such as sales staff, customer service personnel, security officers and maintenance staff.

Based on advanced yet proven radio technology the BALWS lone worker solution allows voice communications between mobile staff around the site. In addition, a lone worker feature will automatically alert others on or off site should a problem occur. If a member of staff gets into difficulties they can manually alert others by using the emergency button on the lone worker radio. For additional peace of mind a man down function is also provided. Alarms can be sent to the base unit in the office, other portable lone worker units in use around the site or to multiple telephone numbers.

The system is designed to be operated 24 hours a day and has numerous fail safe features built in to avoid false alarms and to provide total peace of mind for employer and employee alike. The system is very simple and quick to install and can be equipped with tamper alarms and battery back up so will still operate in the event of a power failure.

From as little as £450.00 per site for the infrastructure with no additional contract fees or rental charges the BALW system is the most cost effective way to protect your staff.
